**The Science of Bakery Products W. P. Edwards 2007 From cakes and biscuits to flat breads and standard loaves, the chemistry behind these processes is fascinating. Explaining the science behind bread making and other baked goods, this book looks at the chemistry of the ingredients, flour treatments, flour testing, and baking machinery. It is aimed at anyone with an interest in everyday chemistry.**

**Beneficial Co-Utilization of Agricultural, Municipal and Industrial by-Products Sally Brown 1998**

**The potential for blending residuals to create valuable products that are publicly accepted is an example of recycling at its best. Previously, much of the research done on reuse of residuals has centered on potential negative effects. Generally, blending of materials has been done in a relatively haphazard fashion. There is a growing understanding that residuals can be deliberately mixed for specific end uses. This is the initial phase of transition from residuals disposal to product development. The XXII Annual Beltsville Symposium focused on the range of factors that need to be taken into account for any co-utilization programme to be successful. The proceedings include research reports as well as reports from the private sector. Potential uses for co-utilization products as well as areas requiring more research are outlined.**

**Products Liability Law Mark Geistfeld 2021-10-07 Products Liability Law, Second Edition, by prolific tort scholar Mark Geistfeld, represents the “next generation” of casebooks on products liability. Earlier texts focused on the relative merits of strict liability and negligence, embodied in the apparently competing liability frameworks of the consumer expectations test in the Restatement (Second) of Torts and the risk-utility test in the Restatement (Third) of Torts. The majority of courts, however, have incorporated the risk-utility test into the framework of consumer expectations. By providing balanced coverage of both consumer expectations and the risk-utility test, the casebook keeps pace with ongoing developments in the case law and moves beyond the battles that largely defined products liability in the twentieth century. In addition to teaching students how liability rules protect consumer expectations via comprehensive application of the risk-utility test, this innovative casebook underscores the importance of doctrinal history, the psychology of evaluating product risks, and the role of products liability in the modern regulatory state. Students will learn how courts have applied established doctrines to novel problems ranging from the relevance of scientific evidence in toxic-tort cases to the distribution of defective products on the Amazon online marketplace. To further illustrate this dynamic, the casebook has twenty-nine problems with associated analysis involving the liability issues likely to be raised by the emerging technology of autonomous vehicles. Finally, the casebook reinforces students’ knowledge of fundamental tort principles while developing specialized expertise and a deeper understanding of the torts process. New to the Second Edition: A dozen new main cases updating older case law, providing coverage of new issues not addressed in the First Edition, and/or improving upon the analysis provided by the associated case in the First Edition Retention of the majority of main cases from the first edition, with revisions to the ensuing notes incorporating relevant case law developments A reorganized and updated chapter covering the controversy over the relative merits of the consumer expectations and risk-utility tests Comprehensive discussion of the tort version of the implied warranty—the genesis of the consumer expectations test—and its relation to product malfunctions and the risk-utility test A new chapter addressing the existence of the tort duty and identifying the difference between patent dangers and patent defects Reorganization of the chapter on factual causation, emphasizing the continuity of evidentiary problems running across different types of cases, ranging from the heeding presumption in warning cases, to market-share liability, to proof of both general and specific causation in toxic-tort cases Professors and students will benefit from: Classroom-tested materials taught for over 20 years by an award-winning professor Interesting cases that illustrate both the traditional and contemporary character of products liability litigation; cases are followed by extensive notes Each chapter addressing doctrinal issues concludes with problems on autonomous vehicles. The full set of 29 problems provides students with the necessary background for understanding liability issues posed by this emerging technology. Each problem is followed by the author’s analysis of the associated issues, cross-referenced to the relevant casebook material.**

**Akzeptanz- und Ökonomiefragen zu Tierwohl und Smart Products in der deutschen Landwirtschaft Sirkka Schukat 2021-12-01 Das übergeordnete Ziel der Dissertation war es, aktuelle und zukunftsrelevante Fragestellungen der Agrar- und Ernährungswirtschaft aus Perspektive der Landwirtschaft näher zu beleuchten. Konkret betraf dies die Themenfelder Smart Farming und Tierwohlprogramme in Deutschland sowie die Etablierung der Neuroökonomik in der agrarökonomischen Forschung. Im Vordergrund standen Untersuchungen zu Akzeptanz- und Kostenfragen hinsichtlich der Nutzung von Smart Products und der Teilnahme an dem nationalen**

**Tierwohlprogramm Initiative Tierwohl. Dabei wurde ein breites methodisches Spektrum berücksichtigt und angewendet. Die gewonnenen Forschungsergebnisse dienen dazu, Chancen und Barrieren der Nutzung von Smart Products sowie der Implementation höherer Tierwohlstandards im Rahmen von Tierwohlprogrammen aus Sicht der Landwirte aufzuzeigen. Aus den Ergebnissen konnten Handlungsempfehlungen für unterschiedliche Akteure abgeleitet werden.**

**Dynamic Products Sara Colombo 2016-06-16 This book explores how dynamic changes in products' sensory features can be used to convey information to the user in an effective and engaging way. The aim is to supply the reader with a clear understanding of an important emerging area of research and practice in product design, referred to as dynamic products, which is opening up new possibilities for the integration of product design with digital and smart technologies and offering an alternative to the use of digital interfaces. Dynamic products are artifacts displaying sensory characteristics - visual, tactile, auditory, or olfactory - that change in a proactive and reversible way over time, addressing one or more of the user's senses. The reader will learn why and how to communicate by means of such dynamic products. Their potential advantages and limitations are identified and design tools are proposed to support the design activity. It is hoped that the book will stimulate the design community to reflect upon the ever more compelling need to merge the virtual and the material in the information society by exploiting technological possibilities in order to create more meaningful and involving experiences.**

**How to Launch a New Product Robert Leduc 1966**

**Characterization of Corrosion Products on Steel Surfaces Yoshio Waseda 2006-10-06 This book describes the fundamental aspects of materials characterization for the ferric oxyhydroxides formed on steel surfaces. Selected examples, from both the basic science and the applied engineering points of view, are presented. Of special interest is the new structural information on ferric oxyhydroxides containing a small amount of alloying elements. The text relates this to their various states and their role in corrosion processes.**
